

Overview

Coombe Hill is a designated Site of Special Scientific Interest, known for its chalk grassland and acid heathland. It supports over 30 wildflower species and 28 butterfly species, including the small heath, meadow brown, ringlet, and common blue. Notable plants include rock rose.

Tiny yellow meadow ants form mounds across the site and have a symbiotic relationship with chalkhill blue butterfly caterpillars, protecting them from predators. Wildlife also includes red kites, green woodpeckers, and buzzards.

The access walk to the Monument is short but mildly challenging, with stunning views at the end — perfect for picnics, dog walks (dogs must be on leads), and nature watching. Mobility aids like powerchairs or scooters are recommended for easier access for those with mobility or stamina related conditions.

Access & Facilities

Paths: Paving varies, fine gravel, brick and earth, uphill from car park

Toilets: None

Café: None on site, but cafes nearby in Wendover.

Location

 Lodge Hill, Aylesbury, Bucks HP17 0UR
